Description

DigiFarm's GIS Engineer supports the product team and reports directly to the Chief Operating Officer. The Engineer works at the intersection of data analysis, programming and cartography. Their primary duties include analyzing spatial data through mapping software and designing digital maps with geographic data and various other DigiFarm data sets.

Responsibilities

- Designing, develop and implement systems and databases for geospatial data and other Prospector data sources;
- Standardize geographic data;
- Research and conduct tests on new research tools;
- Perform geospatial modeling and spatial analysis;
- Build, update and maintain databases and GIS software and hardware;
- Additional duties as assigned.

Qualifications

- Degree in computer science, geography, surveying, engineering or related field;
- Proficiency with database programming languages such as My SQL, R, or Python;
- Detail-oriented and analytical thinker;
- Excellent communication skills;
- Ability to thrive in a fast-paced startup environment.
