Description

The United Nations World Food Programme is the world's largest humanitarian agency fighting hunger worldwide. The mission of WFP is to end global hunger. Every day, WFP works worldwide to ensure that no child goes to bed hungry and that the poorest and most vulnerable, particularly women and children, access and consume diverse nutritious food to avert double burdens of malnutrition. In Ethiopia, an estimated 70 percent of the population are employed in the agriculture sector (crops and livestock). In addition, much of the arable land is rain-fed with only 2 percent irrigated while with much of the cultivated land occupied by smallholder farmers (96 percent). Furthermore, an estimated 20 million people in Ethiopia require humanitarian assistance of which 9.8 million people are largely due to severe drought effects. Ethiopia, like any other sub-Saharan country remains extremely prone to cyclic effects of climate change with impacts varying across the different regions.

Despite these challenges, Ethiopia has made significant development gains in recent decades, leading to important progress towards reducing poverty rates of above 20% between 2000-2015 and a 55% reduction in the Global Hunger Index since 2002. Progress has been registered in cereal production from 10.9 million metric tons (mt) in 2000/01 to 29.7 million mt in 2019/20 with increased consumption and dietary diversity contributing to significant health advancements. The percentage of households that are food energy deficient has dropped dramatically from 64% in 2000 to 40% in 2016 and promising improvements have also been noted in children's nutrition, where rates of undernutrition among children under five decreased significantly from 41% in 2000 to 24% in 2016.

WFP Ethiopia Country Office has supporting Climate Change Adaptation intervention Horn of Africa Risk Transfer for Adaptation (HARITA) which evolved into R4 Rural Resilience Initiative focusing on productive safety net intervention (Disaster Risk Reduction, Risk Reserves – Village Economic and Savings Groups, Prudent Borrow – Formal Credit and Risk Transfer – Insurance). Most recently the CO with technical support HQ developed a Satellite based Index Insurance for Pastoralists in Ethiopia (SIPE) avert risk averseness of (agro) pastoralists to climate shocks that have repeatedly experienced huge losses of livestock due to insufficient fodder and water. The CO is also working with the Social Protection team with support from HQ to develop meso level insurance product that will be integrated to the existing shock responsive Productive Safety-Net Programmes (PSNP). Integration of the three financial services originally conceptualized under the R4 is key in all the existing CCRB interventions as they will continue acting as key and strategic enablers.
